

# Cable routing bracket at the back of the chassis

## Overview

Strain relief bar (SRB) is a cable management solution, which in most cases, attaches to the back of the rails via the strain relief bar brackets. It also helps you arrange interface cables in such a way that the power modules, fan assembly, and air filter for the Cisco 10005 router. The cable management bracket enables you to route the cables outside the router and away from the Routing Engines and LMICs. Figure. These rack types are broken down in Table 2 into 4-post and 2-post styles. 4-post rack types contain vertical mounting flanges with either square-hole, unthreaded round-hole, or threaded round-hole designs as part of the rack and rail interface. This washer is not installed. The following guidelines provide cabling information for installing, migrating, relocating, or upgrading your system: Position drawers in racks to allow enough space, where possible, for cable routing on the bottom and top of the rack, and between drawers. Shorter drawers must not be placed between.
