

# Connecting a 10GE optical port on a switch to a PTN port

## Overview

Install the 10G SFP+ modules into the 10G uplink ports on both network switches, and make sure they're securely seated. Connect one end of the 300M pre-terminated fiber optic cable to the 10 SFP+ module at one endpoint. Properly route the fiber cable. 1. You have the option to utilize a scalable model based on your bandwidth requirements, choosing between PON pluggable optics or Ethernet optics for your. To begin building a 10G point-to-point fiber link, a network switch with a 10G SFP+ uplink is crucial. The 10G uplink allows for seamless integration into a 10G network infrastructure, enabling the deployment of high-performance applications and the fast transfer of large data files and. This guide intends to elucidate 10G SFP ports attached to Cisco switches with ease for a reader in a technical overview, where 10G SFP ports can be put to good use. This article will enable you to hone in on which transceivers you should purchase, what the most optimal configuration would be and. One end of the optical fiber in a hybrid optical/electrical cable is connected to a 10GE optical port on a switch, and the other end is connected to an uplink 10GE optical port on an AP. This standard specifies full duplex point-to-point links.
