

Cut the 90° bend in the cable tray

Overview

Creating a 90-degree elbow in an electrical cable tray, often called a "fabricated" or "mitered" bend, involves cutting, bending, and fastening a straight section of tray. The most common method involves creating two 45-degree cuts to form a 90-degree angle. Engineers and contractors in North America and the cable tray is 3 metres in length, this doesn't matter but I think the width does. But the length of the part in the centre is the concern as I have seen different. The first step is to mark out the tray (A). Construction of a flat 90° bend (A) The amount of tray lip to be removed is equal to 2, 3/4 the width of the tray, half of this measurement will be removed on either side of the centre line. Perfect for electricians! #electrician #worklife Keywords: cutting cable tray techniques, 90 degree cable tray bend, cable tray installation tips, electrical work cable tray, bending cable trays, cable tray.
