

European Standard Distribution Box

Overview

A European standard distribution box —also known as a consumer unit or distribution board—is a critical component in electrical installations, responsible for safely dividing an incoming power supply into subsidiary circuits while providing overload and fault protection. A cabinet that supports both surface mount electrical enclosure use and flush mount electrical enclosure use reduces inventory complexity, simplifies decision-making, and adapts more easily to different wall conditions. When that same cabinet also offers a tempered glass door, modular DIN rail. European-style cable distribution box is a cable-based engineering equipment widely used in power distribution network systems in recent years. The cables are clearly arranged and the three-core cables do not require large-span crossovers. If you lay cables, these must also be distributed. The range of applications extends from pure energy distribution in buildings to building automation and through to industrial plants. SMART DISTRIBUTION BOXES FOR FLEXIBLE BUILDINGS.
