

Fiber optic patch cord ferrule type

Overview

An APC connector has an 8° angle cut into the ferrule. APC fiber ends have low back reflection even when disconnected. At ZION Communication, we design and manufacture a full range of fiber patch cords for: This guide will help you quickly understand the main types of fiber patch cords and how to choose the right solution for your project – and how ZION can support you with stable quality, flexible customization. Fiber optic patch cords, also known as fiber optic patch cables or fiber jumpers, are indispensable components in modern optical networks. They act as the critical link for interconnecting devices like optical switches, servers, and distribution frames. Their manufacturing uses a series of advanced process technologies, including nano-zirconia powder injection molding material formulation and forming technology, slender. Fiber optic patch cords refer to fiber optic cables with connectors at both ends and a thick protective layer. It is mainly used in applications such as optical fiber communication systems, optical fiber access networks, optical fiber data transmission networks, and local area networks. They are also called fiber jumpers.
