

Gyftzy guide optical cable

Overview

Pine layer twisted non-metal flame retardant optical cable GYFTZY (2-288 core) is a type of optical fiber cable used for long-distance telecommunications and data transmission. The tubes (and fillers) are stranded around a non-metallic central strength member to form a cable core. Then, a LSZH outer jacket is extruded. This cable is specifically designed for harsh environments where traditional metal cables may corrode or be damaged. Long-haul communication, interoffice communication. GYFTZY (non-metallic strengthening member, flame retardant, loose tube layer-stranded filling type, polyethylene sheath) non-metallic flame-retardant optical cable (general power optical cable adopts layer-stranded type) is basically the same as in GYFTY, mainly based on GYFTY optical cable. The fiber reinforced plastic central strength member, Tube filling gel, Loose tube stranded, PE sheath outdoor cable. Application Operating Temperature Water-blocking construction Moisture-proof and prevents water penetration Special filling gel in loose tubes Reduce or eliminate reflection losses and.
