

How to set up a fiber optic master and slave router

Overview

To set up your router for fiber internet quickly, connect the router to your fiber modem, access the router's settings via a web browser, and input the provided ISP credentials. Make sure to update the firmware, configure Wi-Fi security, and customize your network name for. However, setting up a fiber optic connection to your router can seem daunting if you're unfamiliar with the process. Compared to having a home network with a FritzBox router, the Mikrotik router has several advantages including: and less. In this tutorial, we'll show you how to configure a router as a slave. This configuration is very useful if you have a large network or if you need to extend your Wi-Fi signal to an area of your home where it doesn't reach. However, if you're not accustomed to some of the jargon, like MAC cloning and PPPoE, you may encounter a few. Shall I declare the eth2 port as the slave of eth1 and eth1 as the master ?

If yes, where can I find the method (in the forum, in a tutorial.) ?

Note that I didn't use the bridging ! A typical setup is where you have ether1 as your WAN interface. It's master is NONE and it is not a bridge port.
