

# How to use a remote monitoring type fiber optic OTDR tester

## Overview

To perform an OTDR test correctly, you must: 1. Set core parameters (Wavelength, Distance, Pulse Width); 4. Run the test (Real-time or Average); 5. An Optical Time Domain Reflectometer (OTDR) is the most powerful tool for characterizing fiber optic networks. It works like "radar for fiber optics," sending light pulses down the fiber and analyzing the reflected light to measure loss, locate faults, and verify installations. Automated: In addition to GIS mapping and powerful analytics, the cloud-native EXFO RFTM offers automated test configuration, execution and results, as well as open APIs. Smart: iOLM. FOA "Quickstart Guides" are short, simple guides to basic fiber optic tests. Learn step-by-step how to use FiberComplete PRO on your VIAVI OTDR for maximum. The AQ7277B delivers precise, high-resolution reflection analysis for fiber-optic network monitoring and troubleshooting.
