

# How to wire the high low beam integrated module

## Overview

Locate the dimmer wire leading to your low and high beams. Connect it to the appropriate output terminal on the new control unit. Ensure you match the output to the original low and high beam leads to maintain proper. A switch (generally called a Headlight Switch) is located on the dashboard or steering column which allows the driver to turn the headlights on and off or adjust between low and high beams. High beam and low beam are two modes of car headlights that provide different levels and directions of light. Here's a sample high beam low beam headlight wiring diagram: The wiring diagram above illustrates the vehicle's headlight plug alongside the various wiring connections of your low and high-beam bulbs. Once your brand-new high and low-beam. The function of the momentary switch module is to switch power between Relay 1 and Relay 2 by activation of a ground trigger on the module gray wire. When used alongside an automotive relay, you're able to add additional high-current light sources, and/or any other accessory, that you wish to control via the vehicle's high beam controls (see page 4). Applications The CANM8 CANNNECT HIGHBEAM is an ideal solution for. Pin 1 usually connects to the battery power source; Pin 2 routes to the low-beam relay or bulb; Pin 3 links to the high-beam relay. Secure all joins with heat-shrink tubing for added.
