

Italian Active Optical Device 200G

Overview

The 200G AOC is used for 200G Ethernet transmission over distances of 1-100m. We use modern machining methods, with hand finishing of each surgical instrument by highly skilled makers. Our rigorous quality assurance system meets the requirements of CE 13485:12 and international procedures. Each surgical instrument is tested and verified one. 200G Active Optical Cable has QSFP56 module in both ends. GIGALIGHT provides a series of BER testing tools (checker) for 10G SFP+, 25G/32GFC SFP28, 40G QSFP+, 100G QSFP28, 200G QSFP56, and 200G/400G QSFP-DD optics. AOCs are equipped with both an electro-optical conversion chip and an opto-electronic conversion chip, and are used to transmit high-speed signals through optical fibers. The 200G QSFP56 AOC offers high-end port density and configurability, and a much longer reach than passive copper cables in the. There are two types of 200G AOC: QSFP-DD AOC and QSFP56 AOC, both with wavelengths of 850nm.
