

Malawi has no fiber optic cables

Overview

Stella Senti, Managing Director of ESCOM Optic Fibre Communications, presented updates on the country's national fiber network. ESCOM has already rolled out fiber in ten districts, and even connected Likoma Island, where availability reaches an impressive 99. The initiative is part of the Africa Broadband Mapping Project, led by the International Telecommunication Union (ITU) and. But beyond the damage itself, I keep asking: Do we have clear national guidelines for how fiber cables should be installed, marked, and protected in Malawi?

If not, it's time we pushed for: Clear installation standards from MACRA Coordination between ISPs, city councils, and contractors . This is a list of terrestrial fibre optic cable projects in Africa. While submarine communications cables are used to connect countries and continents to the Internet, terrestrial fibre optic cables are used to extend this connectivity to landlocked countries or to urban centers within a country. The National Fiber Backbone Project is one of the projects the Chinese government is financing in the country. The project is going to be financed through a soft loan from China Exim Bank and will be implemented by Huawei Technologies. The Project is expected to lay Fiber from the northern border. Malawi's President Lazarus Chakwera has launched phase II of the country's national fibre backbone project, central to the country's digital transformation.
