

Norway has several Huijue fiber optic cables

Overview

The Svalbard Undersea Cable System is a twin submarine communications cable which connects Svalbard to the mainland of Norway. The two optical fiber cable consist of two segments, from Harstad to Breivika in Andøy Municipality, and from Breivika to Hotellneset near Longyearbyen in Svalbard. The segments from Harstad to Breivika are 74 and 61 kilometers (46 and 38 mi) long, respecti. HistorySvalbard was chosen for the location of SvalSat because of its high which allows all satellites in a with an orbit above 500 kilometers (310 mi) to use only a single ground station, yet allow downloadin. The fiber cable system runs from Harstad via Breivika on the island of Andøya to Hotellneset on Svalbard. The system consists of two separate cables, Segment 1 and Segment 2 between Breivika and Hotellneset. The Svalbard undersea cable system connecting the archipelago to the mainland was unexpectedly severed in January 2022. A preliminary police investigation implicates human activity.
