# ODMADSS optical cable OM3

## Overview

Here it is: the tight-buffered 50-micron multimode cable that's laser optimized for 10-Gigabit Ethernet. ITEM# FO10G-002M-LCLC, FO10G-010M-LCLC, . Value-based OM3 patch cabling meets or exceeds industry-standard requirements. Fiber optic patch cords are key components for efficient, low-loss optical signal transmission between devices and fiber optic cabling links. Multimode Fiber (MMF) has a core diameter, typically 50–100 micrometers, has ability to transfer multiple modes of light through the fiber core, uses lower-cost electronics (LED, VCSEL) operates at. Our QuickTreX® OM3 50/125 10Gig Multimode Custom Duplex Fiber Optic Patch Cables are expertly crafted in the USA by skilled technicians. These high-performance cables are designed to meet the demands of modern data transmission, supporting up to 10Gbps speeds for both short and long-distance. Fiber optic cables used in telecommunication are broadly categorized into two types – Multimode fiber and Single-mode fiber cables. In ISO/IEC 11801 and EIA/TIA standards five types of Multimode –. While single-mode fiber (SMF) dominates long-distance and carrier-grade infrastructure, multimode fiber remains the most cost-efficient and practical choice for enterprise buildings, campus networks, and modern data centers.
