

Optical Module PQE

Overview

RAYTELA® PQE is specifically designed for the medical industry. It has a PMMA core with a Fluorinated Polymer cladding that creates the highest Numerical Aperture in plastic optical fiber in the world. Whether you are creating a 100-Gbps or 400-Gbps, small form-factor pluggable (SFP) module, SFP+ transceiver, XFP module, CFP, X2/XENPAK module. FiberFin® has teamed up with Toray to bring our customers a high NA medical grade fiber brand name RAYTELA® PQE. Optical modules typically have an electrical interface on the side that connects to the inside of the system and an optical interface on the side that connects to the outside. The Transmitter Optical Sub Assembly (TOSA) is responsible for the emission of light. Because all the SFP optical modules support these monitoring functions, eSFP is also called SFP. It is a standardized measurement — defined under the IEEE 802. In practice, TDECQ expresses how much additional optical.
