

# Removing and releasing optical fiber cable

## Overview

In this informative guide, we'll walk you through the step-by-step process of stripping and preparing fibre optic cable for termination, covering techniques, tools, and best practices to help you achieve successful terminations in your fibre optic installations. To properly remove the optical cable: Locate the port > Stabilize the device > Gently grasp & pull the plug (not the cable) straight out > Do the same with the other end > Cover both connectors with plastic tips. Removing these cables from specialized equipment, such as an Optical Network Terminal (ONT) or fiber gateway, requires different precautions than. Understanding how to remove optical cable is crucial for maintaining the integrity of your audio setup and ensuring a seamless transition between devices. However, situations may arise requiring you to disconnect these specialized cables from modems or routers. With delicate glass components and invisible laser operation, caution is necessary. Warning: Do not look directly into the fiber transceiver or cables as the laser beams can damage your eyesight.
