

Semi-buried distribution box

Overview

The Semi-Buried Prefabricated Substation is an innovative power supply solution that integrates harmoniously with the environment. With one-third or two-thirds of its total height buried underground, it minimizes above-ground footprint while maintaining aesthetic coherence. The UGS Manual includes general information on concrete, steel, precast reinforced concrete structures and pull ropes, conduits, fittings and risers, handholes. The utility model discloses a semi-buried prefabricated box-type substation, which comprises an upper box body and a lower box body, wherein the top of the lower box body is provided with an air suction opening, and the side wall of the upper box body is provided with an air outlet; an air suction. Our semi-buried prefabricated substation is a paragon of excellence, offering a remarkable combination of features. Operation is both safe and reliable, instilling confidence in its users. Today, electrical systems are essential for homes and industries. City Electric Supply offers durable underground enclosures designed to securely house electrical, telecommunications, and utility infrastructure beneath the surface.
