

Should I use a gigabit or 100 Mbps router for a 20 Mbps fiber optic connection

Overview

We recommend choosing fiber if it's available in your area. The upload speeds on fiber dramatically outclass those of a cable-internet gigabit plan, offering 940 Mbps in contrast to 30 Mbps to 50 Mbps. However, your area may have only one high-speed internet choice, so your mileage may vary. Check the FCC's broadband-lookup site to see if additional. "Gigabit" internet is a misnomer. As with most advertised internet speeds, gigabit internet services advertise and deliver up to 1 gigabit per second, or 1,000 megabits per second. That means you don't always see the ultrafast speeds you might expect. Here's how internet speed tiers typically break down: High-speed internet service: This term technically. Although faster sounds better, you shouldn't sign up for a gigabit internet tier before figuring out how you use the internet and whether faster speeds would actually help you with work or play. Streaming video in 4K requires only about 25 Mbps per stream, according to Disney+. Gigabit-level service provides speeds around 900 megabits per second, s. If you work from home, Zoom meetings are perfectly functional at speeds of 3.8 Mbps/3.0 Mbps (up/down) for group or individual meetings, and the requirements are similar or lower for services such as BlueJeans by Verizon, Google Meet, Microsoft Teams, and Webex. Security cameras from companies like Eufy and Wyze need upload speeds of 2 Mbps to 5 Mbps. Considering that most online services don't require faster speeds to function, we believe that plans providing 100 Mbps to 500 Mbps are good enough for a three- to eight-person household; in comparison with gigabit internet, they cost significantly less per month. If you are paying for gigabit internet but are using only 300 Mbps at any given time.
