

Sis signal optical cable

Overview

offers a full range of fiber optic cables designed for precise signal performance across structured cabling environments, datacenters, and enterprise networks. Why Choose SIS Fiber Cables?

High-grade optical materials for long service life. Every module undergoes full signal integrity testing to ensure stable performance across Cisco, Juniper, HPE. Siemon 100G QSFP28 Active Optical Cable (AOC) assemblies offer a highly reliable and cost-effective alternative to transceiver assemblies available in lengths ranging from 0.5 m to 100 m, beyond the range of Direct Attach Copper Cables (DAC). These high performance and low power consumption AOCs. SIS stands for Switchboard Instrumentation Service. SIS wire typically features a solid or stranded bare copper conductor with heat-resistant, cross-linked polyethylene. Amphenol's 100G QSFP28 to QSFP28 Active Optical Cable assemblies are a reliable, cost and power efficient, integrated solution which is ideal for high density signal transmission typically seen in most storage, data centers and high performance computing applications with fiber cable length up to. Switchboard Wire is for use in switchboards for control and power circuits, for applications up to 90°C and 600 volts.
