

Smart Home AI Server

Overview

A dedicated AI home server that runs 24/7 on just 15 watts. Cloud AI services like ChatGPT Plus, Google Gemini Advanced, and Claude Pro. Our community is taking advantage of AI's unique abilities (for instance, its image recognition or summarizing skills), while having the ability to exclude it from mission-critical things they'd prefer it not to handle. Best of all, this can all be run locally, without any data leaving your home! A comprehensive Model Context Protocol (MCP) server that enables AI assistants to interact with Home Assistant. Using natural language, control smart home devices, query states, execute services and manage your automations. Click on your operating system: No token or. Raghav Sethi began his tech writing journey in 2022, contributing to his college's open-source community blog. Later that year, he joined MakeUseOf, and since then has written extensively about Apple, Android, and AI. He writes for XDA-Developers, where he focuses on topics like productivity, networking, self-hosting, and more. This guide addresses the technical challenges of balancing performance, scalability, and resource efficiency in a single.
